

GIULIANO MAZZUOLI

MANOMETRO S

Firenze, Italy. April 2007. Giuliano Mazzuoli has created a sportier version of his innovative Manometro timepiece: MANOMETRO S.

The case is made with 40 layers of carbon fibre without any metal frame thus making Giuliano Mazzuoli one of the first brands to feature such a construction. While the dial is in carbon, the crown and the case back is in titanium.

The carbon fibre and bolder number layout on the dial move Manometro to a more sportier look and Giuliano Mazzuoli once again introduces innovative design into the watch world.

This Italian designed timepiece is powered by a solid Swiss movement; the cylindrical case has a diameter of 45.2 mm and a thickness of 14.8 mm. The black carbon fibre dial shows the date in a circular aperture and sports an "S" logo signifying "Sport". The black rubber strap is fitted into the case and held by two screws. Since carbon fibre is porous, Formula 1 technology is applied to the material making it resistant to water. The watch is water resistant to 5 atm.
