Press Release

Baselworld 2008
Hall 4.1, Stand B17

The design of Manometro S meets the preciousness of gold and the lightness of titanium

The Manometro S collection in carbon fibre expands to include three new versions that reinterpret the sporty nature of the timepiece.

Firenze, Italy. February 2008 – Intriguing challenges stimulate the creative genius of Giuliano Mazzuoli who combines his passion for design with handcraftsmanship thereby transforming his ideas into aesthetic masterpieces that are characterized by their originality, the materials applied, and their craftsmanship. Passion and attention to detail are combined to bring a consistency giving every creation an added value.

The new versions of Manometro S will be on display at the forthcoming Baselworld fair. The 18 carat rose gold bezel (available in polished or brushed finishes), the caseback and the crown add preciousness and glamour to the strength of the carbon fibre of the case while the titanium highlights its sober elegance.

The watches are sought-after and unique. The combination of the materials compliments the technique of the case that houses an automatic Swiss movement and is assembled without the use of a metal frame, utilizing Formula One technology that assures its water resistance. The red rubber ring positioned at 2 o'clock matches the graphic details on the carbon dial thereby giving the watch an additional touch of design.

Aesthetic harmony and quality excellence are always present in Giuliano Mazzuoli's watch creations. This is evident in the Manometro S. The watches are completely handcrafted by Italian craftsmanship and they are presented in a handmade leather watch box.

The complete series of Manometro watches, along with other highly awaited models will be previewed at Baselworld in Stand B17 of Hall 4.1, Hall of Inspirations.
